

$$\lim_{x \rightarrow +\infty} \frac{\frac{2x-1}{x^4+2} - 1}{\frac{3x^2}{x^5+1}} = \frac{0}{0} = 1-1 \cdot \frac{x^5+1}{3x^2} = 1-1 \cdot \frac{x^{\frac{5}{2}}}{x^2} = 0 \cdot \infty$$

forma indeterminata

pongo $\frac{2x-1}{x^4+2} = t \rightarrow$ in questo modo $t \approx$ NUMERATORE
(FANNO ENTRAMBI 0)

quindi per fare questo:

$$t \cdot \frac{x^5+1}{3x^2} = \frac{2x-1}{x^4+2} \cdot \frac{x^5+1}{3x^2} = \frac{2x^6+2x-x^5-1}{3x^6+6x^2} = \frac{2x^6}{3x^6} = \frac{2}{3}$$
